2.10 Storage of Liquids

All containers used to store any liquids shall be located in a bund. The minimum capacity of any bund shall be either; 110% of the capacity of the largest container, or 25% of the total capacity of all the containers within the bund, whichever is the greater. In the event of any containers being connected to one another, they shall be treated as one container.

The bunded area(s) and containers shall conform to the following standards:-

- The walls and base of the bund shall be impermeable
- The base shall drain to a sump
- When not in use all taps, pipes and every part of each container shall be located within the area served by the bund
- Vent pipes shall be directed downwards into the bund
- No part of the bund shall be within 10 metres of a watercourse
- All containers with a design capacity above 1000 litres shall be fitted with a device for continuously monitoring the level of the contents

The accumulation of rainwater, spillages or leaks shall be managed to ensure that at least 95% of the capacity of the bund is liquid free.

2.11 Weighbridge

A weighbridge shall be provided at the site as detailed in the Working Plan.

3.3 Storage Capacity

The maximum amount of waste stored on the site shall not exceed 450 cubic metres. In the event that the maximum capacity of the storage facilities is reached, no further waste shall be accepted at the site until storage capacity becomes available.

4.2 Maximum Duration of Storage
